OBJECTIVE

I'm a Computer Science student who enjoys building both the front-end and back-end of web applications. My goal is to gain real-world experience applying what I've learned in school and personal projects, while continuing to grow my skills in programming and software development. I'm excited to contribute to a team, take on challenges, and grow as a developer.

EDUCATION

The University of Mindanao

Aug 2022 – Present

Bachelor of Science in Computer Science

Relevant Courses: Web Development, Data Structures and Algorithms, Database Systems, Software Engineering

SKILLS

Languages: JavaScript, Python, Java, PHP, SQL, HTML5, CSS3, Dart

Skills: Object-Oriented Programming, UI/UX Design, Database Design, Version Control

Tools & Frameworks: Laravel, Tailwind CSS, DaisyUI, MySQL, PostgreSQL, Git & GitHub, Figma, Canva, Jupyter Notebook, Arena Simulation, Flutter

Currently Learning: ReactJS

PROJECTS

Frontend Developer – New Century Books OIMS (Order and Inventory Management System)

Technologies: *Laravel, Tailwind CSS, JavaScript*

- Built responsive user interfaces and front-end components for an order and inventory management system.
- Used Tailwind CSS and JavaScript to create dynamic, user-friendly pages within the Laravel framework.

Backend Developer – PaoPals (Siopao Online Store with Inventory Management System)

Technologies: *PHP, HTML, CSS, JavaScript*

- Developed backend logic and server-side functionality for an online siopao store with inventory management.
- Designed the database structure for product listings, orders, and stock tracking.

Machine Learning & Backend Developer – XGBOOST Phishing Detection

Technologies: *Python, XGBoost, Flask, Scikit-learn*

- Trained an XGBoost machine learning model to detect phishing emails with high accuracy.
- Built backend services to serve model predictions through a web application.

Full Stack Developer – Stress Predictor

Technologies: *Python, Machine Learning, Flask*

- Trained a machine learning model to predict stress levels based on user input data.
- Built both the backend logic and frontend interface for data input and result visualization.

OJT EXPERIENCE

Fullstack Developer Intern – Infinity Hub (NurseWay)

Jul 2026 – Aug

2026

- Onboarded onto the NurseWay platform, reviewing the codebase and mapping out a roadmap of UI/UX and feature improvements.
- Rebuilt and polished admin, employer, and candidate interfaces — card/icon animations, skeleton loaders, responsive layouts, and reusable table, form, and pagination components.
- Shipped major features including multi-currency support, a career guide management system, candidate verification tools, and a redesigned talent search with an improved matching algorithm.
- Strengthened platform reliability and security by scoping API endpoints, adding permission checks and automated tests, and adding a 51-test suite for edge cases.
- Improved messaging with real-time auto-sync and attachments, and delivered branded error pages and other platform fixes.

CERTIFICATES

IT Specialist in Java – Certiport

IT Specialist in Databases – Certiport

IT Specialist in Network Security – Certiport

Git and GitHub Workshop – University of Mindanao

JavaScript Workshop – University of Mindanao

SEMINARS & TRAINING

Quality Assurance Seminar

University of Mindanao – Covered software testing processes, bug tracking, and quality assurance methods to ensure product readiness before deployment.

Workplace Readiness & Wellness Seminar

University of Mindanao – Covered office etiquette, professional work ethics, harassment awareness, and mental health in the workplace.
